Description

Misconfigured redirects can lead to incorrect locations. This can confuse users, ruin their experience, increase the number of HTTP requests to your website, and result in a traffic drop and crawling budget decline. The checks in this section help you maintain control over your redirects and pinpoint room for improvement related to them.

Description

By using JavaScript, web developers can create dynamic and interactive websites. At the same time, JavaScript files are usually rather heavy and can significantly slow down your website if they are not optimized. Fix the errors listed in this section so that JavaScript files won't hinder your website's fast loading speed.

Description			

No website can do without CSS files since they make sites visually appealing. At the same time, when used unoptimized, CSS files can slow down your website. Fix the errors listed in this section so that CSS files won't hinder your website's fast loading speed.

Description

Internal links help search engine crawlers discover new web pages and ensure link equity distribution across the website. External links help support ideas and facts expressed in content with data from external sources. Both are indispensable components for a good user experience. However, they can ruin it if they don't work properly. This section checks whether the links on your website work correctly. It also suggests improvements if it discovers any issues.
